

DA SERIES HEPA FILTERS

Our **DA Series** range of high efficiency filters are specifically designed to collect airborne contaminants such as toxic dust, filterable viruses, bacteria and mists.

Direct Filtration offer a cost effective high air volume capacity HEPA filter for extended life and significant energy savings at increased air flow.

The water repellent, fire retardant core is treated with anti-fungicide and sealed into a wooden or steel casing before being fully DOP scanned and tested to guarantee a quality product every time.

Our Deep Pleat HEPA is constructed from micro fine glass fibre paper, precisely pleated to present an extended core surface area which is reinforced with craft paper or aluminum for extra rigidity to ensure the entire filter surface is utilised with minimum resistance.

- Available in grades from F6 to U17
- High efficiency
- Efficiency to 0.3 micron
- DOP Tested

When ordering please state the High (mm) Width (mm) Depth (mm) & Grade required
